John Danison

ECET 329 – Project 01

2/14/2025

Psuedocode:

```
Psuedocode:
1) I will set up the board using the process defined by the book.
2) Once initialized, I will define myLED pin to be GPIO Pin 5.
3) I then will turn the onboard LED on.
4) I will then wait 500ms.
5) I will then turn the LED off.
6) I will then wait 500ms.
7) I will then repeat by to step 4.
```

How I programed it:

To program the board I decided to create the binary
file and then place it onto the Nucleo board.

This was done by changing project properties to allow
for the creation of the binary file.
